

Please spend some time responding to the following questions. Your answers to these questions will be used to differentiate your application and convince us that you have the suitable skills and attitude to participate in the Quantifying Uncertainty sandpit.

Note – we are not looking for your academic publication or research track record, but rather how you might approach cross-disciplinary problems in this area and at the sandpit.

(Guide: 100 words each)

a. What is your personal experience of working with people in teams?

b. How would you describe your ability to explain your research to non-experts?

c. The sandpit will be especially suited to individuals who are willing to step outside their particular area of interest or expertise, who are positively driven, who can think innovatively and who can settle in easily in the company of strangers. How well do you see yourself fitting in?

d. What do you hope you would personally gain from participating in this sandpit?

NOTE: Each EoI should be no longer than 2 sides (i.e. its current length in this format) and in an easily readable font. Please do not substantially alter the contents of this form or remove elements of it just to keep within the page limit.

Please Email completed forms to Ann Kemp ansi@nerc.ac.uk
